

CHARACTERISTIC OF THE NEGATIVE DEVELOPMENT:

- processing ability -1200m/h
- reliable magnetic drive
- automatic dosage system and chemistry temperature measurement
- silver recovery system in the process of electrolysis
- high-quality workmanship (dishes with chemistry made of acidproof steel and titanium alloys)
- additional developer filtration system what in conjunction with super accurate peristaltic pump guarantees the highest quality.
- equipped with a unique system (FilmStroboChecker) which allows to evaluate visual image quality of the film during the development process.
